Visit to Lisarow High School

BOOM! Year 5 students went to Lisarow High to participate in some science activities. We got to test out some chemicals, such as copper, calcium, potassium and strontium and we put them in a flame to see how they react and the colours they make. Just like fireworks!

We were lucky enough to see some marine animals such as baby turtles in one of the science rooms and we visited the animal farm and saw a baby goat and held a baby chick.

Before we left we had a healthy treat as we picked a fresh carrot from their vegie patch.
